

Specifications:

Please amend the paragraph at page 5, line 13-22 to read as follows:

A pump generally indicated by the numeral 25, is typically attached to or formed integrally with the container 20 for dispensing soap therefrom. As shown, pump 25 may extend downward from container 20 between shoulders 17. With reference to Figs. 3 and 4, pump 25 may, for example, be attached to the container 20 at a neck 21 extending downwardly from container 20, as by a threaded ~~cap 22~~ collar 40 that fits over the pump 25 and threads onto the neck 21. As shown, the pump 25 may include an annular rib ~~26~~ that rests against the rim at the open end of container neck 21, and collar 40 may hold the pump 25 in place by fitting there over a shoulder 23 that extends radially inward from the cap 22. The nozzle 27 of the pump 25 protrudes axially outward from the collar 40 ~~cap 22~~, and, in the example shown, is moved upward to dispense soap from the container 20.
